What can you do?

- Any change to a system, including the addition of a new safety device, is a change that must be reviewed using your plant’s Management of Change (MOC) procedure.
- When doing an MOC review of a new safety device, be sure to consider the possibility that the change introduces new hazards.
- After the change is reviewed, make sure it is implemented correctly and is ready for operation using your plant’s pre-startup safety review (PSSR) process.
- Get emergency response personnel involved in MOC and PSSR if the change impacts them.

Review all changes – even those intended for safety!
